

Project Proposal

- The name of your website: The Verdant Vibe
- The description of your topic: must contain at least 5 sentences
 - The website will be a blog about plants. The blog itself will be a variety of information like local plant shops, and gardens. Additionally, the website will contain pages about the different types of houseplants, along with garden plants. Additionally, it will have care guides, like how to care for certain plants, what to do if a plant doesn't look healthy, how to control fungus gnats, etc. I will also have a page that would contain resources such as articles and books in order to give the user the opportunity to learn more about plant care elsewhere.
- A list of each of the page names (Note: About Us would be a page, but login would not (That's more like a popup feature)).
 - Blog/Home (where page starts)
 - Contact Us/About Us
 - House Plants
 - Gardening
 - Care (How to care for certain plants, plant help)
 - Resources (Books, articles such...)
- A description of the data you will be storing, manipulating and viewing. Go Into details, e.g. We will be storing a list of tools (Tool name, description, price, producer, ...). Only the administrator will be able to add / edit / delete, so we will need user accounts with login security.
 - Data that would have to be stored would be blog comments, plant information, articles and books to help with research purposes. What would need to be stored for plant information includes name, soil, light, and watering.
